

PROJECT POSTER GUIDELINE

1. Poster Format Requirement

Students are required to prepare **one project poster** for their

Item	Requirement
Poster Size	A1 size
Printing	Hardcopy, full colour
Group Size	3 - 4 students per group
Softcopy Format	PDF format only
Design Tool	Canva, PowerPoint, Adobe Illustrator, Photoshop, or any suitable design software
Orientation	Portrait
Language	English
Submission	Hardcopy printed poster and softcopy PDF

2. Poster Submission Requirement

Each group must submit:

A. Hardcopy Submission

- Students must print the poster in:
- **A1 size, full colour, clear and readable.**
- The printed poster must be submitted according to the date and instruction given by the lecturer or project supervisor.

B. Softcopy Submission

- Students must also submit the poster in: **PDF format only.**
- Suggested file name format **GROUPXX PROJECT TITLE.pdf**
- Example: **GROUP 01 ALI RESTAURANT MANAGEMENT SYSTEM.pdf**

3. Required Poster Content

The poster must clearly present the overall summary of the project. The content should be short, professional, and easy to understand.

3.1 Header Section

The top section of the poster should include:

1. UTM / Institution Logo
2. Programme / Department Name
3. Subject Code and Subject Name. Example: DSPD 2794 Project
4. Project Title
5. Project Logo (if available)

The project title must be clear, specific, and related to the system or application developed.

Example:

- FoodExpress Online Food Ordering System
- MediLink Hospital Management System
- Smart Parking Management Application

3.2 Project Introduction / Overview

This section explains the project briefly.

Students should write:

- What the project is about.
- Who will use the system.
- Why the system is developed.
- What main problem the system tries to solve.

Example:

This project focuses on the development of a web-based restaurant management system that helps restaurant staff manage customer orders, menu items, table reservations, and payment records more efficiently.

3.3 Problem Statement

The problem statement should explain the issue that exists before the system is developed.

Students should write about:

- Current problem faced by users.
- Weakness of the existing manual or current process.
- Effect of the problem on users, staff, customers, or organization.

Example:

The current ordering process is handled manually, which may cause order mistakes, slow service, difficulty in tracking sales, and inefficient communication between customers and restaurant staff.

3.4 Project Aim

The project aim should be written in **one clear sentence**.

It explains the main purpose of the project.

Example:

The aim of this project is to develop a web-based restaurant management system that improves the efficiency of food ordering, menu management, and sales tracking.

3.5 Project Objectives

Students should provide **3 to 5 objectives**.

Objectives should begin with action verbs such as:

- To develop
- To design
- To implement
- To test
- To evaluate

Example:

1. To develop a web-based system for managing customer orders and menu information.
2. To implement user login and role-based access for admin and staff.
3. To provide a sales report feature for monitoring restaurant performance.
4. To test the system functionality based on user requirements.

3.6 Project Scope

The project scope explains the system boundary.

Students should include:

- Type of system: web-based application, mobile application, or IoT system.
- Target users.
- Main modules or features.
- Platform or technology used, if suitable.

Example:

This project focuses on a web-based restaurant management system for three main users: admin, staff, and customer. The system includes login, menu management, order management, payment record, and sales report modules.

3.7 Proposed Solution

This section explains how the developed system solves the problem.

Students should mention:

- Main solution provided by the system.
- How the system improves the current process.
- Benefits to the target users.

Example:

The proposed system provides a centralized platform for customers to place orders and for staff to manage menu, orders, and payment records. This system reduces manual work, minimizes order errors, and improves service efficiency.

3.8 System Features / Main Modules

Students are encouraged to include the main system modules in the poster.

For a group of **3 - 4 students**, each student should be responsible for at least one main module.

Example:

Module	Description
User Management	Manages user registration, login, and role-based access
Menu Management	Allows admin or staff to add, update, delete, and view menu items
Order Management	Allows customers to place orders and staff to manage order status
Report Management	Generates sales or order reports for admin reference

3.9 System Screenshot / Interface Design

The poster must include at least **2 to 4 system screenshots**.

Suggested screenshots:

- Login page
- Dashboard
- Main module page
- Report/output page
- Mobile interface, if applicable
- IoT prototype image, if applicable

Screenshots must be clear and properly labelled.

Example labels:

- Figure 1: Login Interface
- Figure 2: Admin Dashboard
- Figure 3: Order Management Page
- Figure 4: Sales Report Page

3.10 Methodology / Development Approach

Students may include a simple methodology section.

Since this is a project subject, the poster may briefly mention the development approach used.

Example:

This project applies the Scrum methodology, where the system is developed through product backlog planning, sprint development, testing, and final product evaluation.

Students may include a simple flow such as:

Planning → Design → Development → Testing → Final Product

3.11 Technology Used

Students should list the main tools, programming languages, frameworks, database, or hardware used.

Example:

Category	Example
Front-End	HTML, CSS, JavaScript, Bootstrap
Back-End	PHP, Laravel, Node.js
Database	MySQL, Firebase, MongoDB
Design Tool	Figma, Canva
Development Tool	Visual Studio Code, XAMPP
IoT Hardware, if applicable	Arduino, ESP32, sensors

3.12 Team Members

The bottom section of the poster must include all group members.

For each member, include:

1. Student photo
2. Full name
3. Matric number
4. Project role
5. Module or responsibility

Example:

Name	Matric No.	Role	Responsibility
Student 1	AXX1234	Scrum Master	Project coordination and documentation
Student 2	AXX1235	Programmer	User and menu module
Student 3	AXX1236	QA / Tester	Testing and report module
Student 4	AXX1237	Programmer	Order and payment module

3.13 Project Link / QR Code

Students should include a **QR code** or link to the project folder.

The link may include:

- Project documentation
- Source code
- Final report

Suggested link:

Group Google Drive / GitHub / Project Demo Link

The QR code must be working and accessible.

4. Poster Design Guideline

Students must ensure that the poster design is neat, professional, and suitable for final year project presentation.

Recommended Design Criteria

1. Use a clean and professional layout.
 2. Do not put too much text. Use short paragraphs and bullet points.
 3. Use consistent font type and font size.
 4. Ensure all text is readable when printed in A1 size.
 5. Use high-quality images and screenshots.
 6. Use suitable colours that match the project theme.
 7. Avoid using too many decorative elements.
 8. Arrange content in clear sections.
 9. Use icons, tables, or diagrams where suitable.
 10. Make sure there are no spelling or grammar errors.
-

5. Suggested Poster Layout

Students may arrange the poster using the following structure:

Top Section

- UTM / institution logo
- Programme / department name
- Subject code and subject name
- Project title
- Project logo

Middle Section

- Project overview
- Problem statement
- Project aim
- Project objectives
- Project scope
- Proposed solution
- Methodology
- System features / modules
- Technology used

Bottom Section

- System screenshots
 - Team members
 - QR code / project link
 - Supervisor name, if required
-

6. Important Reminder

All poster content must be discussed and confirmed with the **project supervisor** before final printing.

Students are advised to check:

- Accuracy of project title
- Correctness of system features
- Quality of screenshots
- Completeness of team member information
- Working QR code or project link
- Poster readability before printing
- PDF file format before submission

7. Final Submission Checklist

Before submission, make sure the poster includes:

No.	Checklist	Status
1	Poster printed in A1 size	☐
2	Poster printed in full colour	☐
3	Softcopy submitted in PDF format	☐
4	UTM / institution logo included	☐
5	Subject code and subject name included	☐
6	Project title included	☐
7	Project aim included	☐
8	Project objectives included	☐
9	Problem statement included	☐
10	Project scope included	☐
11	Proposed solution included	☐
12	System features / modules included	☐
13	System screenshots included	☐
14	Technology used included	☐
15	Team member details included	☐
16	QR code / project link included	☐
17	Poster checked by project supervisor	☐
18	File name follows the required format	☐
